

Konstantin Fastov

Senior Rust Backend Engineer - Crypto Arbitrage & MEV Systems

Moscow, Russia | UTC+3 | Open to remote employment and contract work

Email: kfastov@gmail.com | Telegram: [@kfastov](https://t.me/kfastov) | LinkedIn: [linkedin.com/in/kfastov](https://www.linkedin.com/in/kfastov) | GitHub: github.com/kfastov

SUMMARY

Senior Rust backend engineer building crypto arbitrage and MEV systems. Experience spans funding-rate execution, exchange connectivity, maker-hedge state machines, deterministic backtesting, Jito bundle tracking, Jupiter address lookup tables, and RPC reliability. Earlier work includes Go blockchain data services and Node.js trading platforms.

CORE SKILLS

- **Arbitrage and MEV:** funding-rate arbitrage, Solana MEV, Jito bundles, Jupiter address lookup tables, Raydium, delta-neutral execution
- **Execution systems:** Rust, Tokio, order-state machines, maker-hedge execution, partial fills, reconciliation, reduce-only safeguards, backtesting
- **Exchange and data:** Binance USD-M, Hyperliquid, Bybit, Lighter, WebSocket market data, PostgreSQL, Redis, ClickHouse
- **Backend and quality:** Go, JSON-RPC, gRPC, Protocol Buffers, deterministic testing, property-based testing, fuzzing, production debugging

EXPERIENCE

Rust Backend Engineer - Trading Systems

Confidential Crypto Trading Company | February 2025 - Present

- Owned the design, implementation, and operation of a Rust funding-rate arbitrage platform with state-machine-based order execution, reconciliation safeguards, and deterministic backtesting.
- Delivered 20 merged PRs to a Solana MEV/arbitrage platform across 2025 and 2026. The platform covered 10+ DEX protocols; contributions included Jito bundle tracking, Jupiter address lookup-table recovery, rate-limited RPC clients, Raydium pool support, and bundle-profit calculation improvements.
- Implemented exchange adapters for Binance USD-M, Hyperliquid, Bybit, and Lighter, and built a WebSocket market-data recorder spanning all four venues.
- Coordinated delta-neutral entry and exit across venues; implemented reduce-only and forced-close safeguards, normalized order and account-event lifecycles, and reconciled positions after partial or failed execution.
- Currently rebuilding the arbitrage platform around a strategy-agnostic Rust core; implemented initial domain primitives, a deterministic clock and event model, and capability-based connector interfaces.

EXPERIENCE CONTINUED

Independent Open-Source Contributor

Starknet / Web3 ecosystem | part-time, paid through OnlyDust | August 2024 - January 2025

- Contributed merged upstream support for [SNIP-9 Outside Execution](#) in `starknet.js` and numeric multicall inputs in `starknet-foundry`.

Backend Developer - Go

Ankr | May 2022 - August 2024

- Worked on Ankr Advanced API, a blockchain data platform spanning 13+ EVM networks plus Solana; contributed across indexing, public APIs, RPC routing, and token-pricing services.
- Designed token-price pathfinding across DEX liquidity pools and implemented Geth/Erigon transaction tracing and node selection.

Backend Developer - Node.js

Alfa Algorithms | August 2021 - May 2022

- Maintained a Node.js, MySQL, and Redis trading backend and its integration with a MetaTrader 4 server; developed Solana governance programs in Rust.

Backend Developer - Node.js

Sobix | May 2018 - August 2021

- Developed a forex WebTrader backend, Ethereum indexing for a custodial wallet, and trading features including trailing stops and real-time PnL calculations; maintained a C++ MetaTrader server plugin.

EDUCATION

Sevastopol National Technical University

Engineering Diploma in Information Systems and Technologies
