

Konstantin Fastov

Senior Backend Engineer - Trading Systems (Crypto & Forex)

Moscow, Russia | UTC+3 | Open to remote employment and contract work

Email: kfastov@gmail.com | Telegram: [@kfastov](https://t.me/kfastov) | LinkedIn: [linkedin.com/in/kfastov](https://www.linkedin.com/in/kfastov) | GitHub: github.com/kfastov

SUMMARY

Backend engineer with eight years of experience across crypto and forex trading systems. Built Rust execution, exchange connectivity, market data, reconciliation, and deterministic backtesting infrastructure. Earlier work includes Node.js WebTrader backends, MetaTrader 4 integration, real-time PnL calculations, and a C++ MetaTrader server plugin.

CORE SKILLS

- **Trading systems:** crypto and forex, order-state machines, exchange adapters, position reconciliation, funding rates, backtesting, PnL calculation, trailing stops, risk safeguards
- **Languages and runtime:** Rust, Tokio, Go, Node.js, JavaScript, TypeScript, C++, SQL
- **Market data and APIs:** WebSocket, REST, JSON-RPC, gRPC, Protocol Buffers, PostgreSQL, Redis, MySQL, ClickHouse
- **Operations and quality:** deterministic testing, property-based testing, fuzzing, Linux, Kubernetes, Argo CD, production debugging

EXPERIENCE

Rust Backend Engineer - Trading Systems

Confidential Crypto Trading Company | February 2025 - Present

- Owned the design, implementation, and operation of a Rust funding-rate arbitrage platform with state-machine-based order execution, reconciliation safeguards, and deterministic backtesting.
- Implemented exchange adapters for Binance USD-M, Hyperliquid, Bybit, and Lighter, and built a WebSocket market-data recorder spanning all four venues.
- Coordinated delta-neutral entry and exit across venues; implemented reduce-only and forced-close safeguards, normalized order and account-event lifecycles, and reconciled positions after partial or failed execution.
- Used property-based and fuzz testing to exercise order-execution and reconciliation invariants, with deterministic reproductions for real production failures.
- Currently rebuilding the arbitrage platform around a strategy-agnostic Rust core; implemented initial domain primitives, a deterministic clock and event model, and capability-based connector interfaces.

EXPERIENCE CONTINUED

Independent Open-Source Contributor

Starknet / Web3 ecosystem | part-time, paid through OnlyDust | August 2024 - January 2025

- Contributed merged upstream support for SNIP-9 Outside Execution in `starknet.js` and numeric multicall inputs in `starknet-foundry`.

Backend Developer - Go

Ankr | May 2022 - August 2024

- Worked on production Go APIs, indexers, RPC routing, and token-pricing services for a multi-chain blockchain data platform.

Backend Developer - Node.js

Alfa Algorithms | August 2021 - May 2022

- Maintained and optimized a Node.js, MySQL, and Redis web-trading backend; built an integration layer between the backend and a MetaTrader 4 server.
- Developed Solana governance programs in Rust for a validator-voting workflow.

Backend Developer - Node.js

Sobix | May 2018 - August 2021

- Developed and maintained a forex WebTrader backend, including trailing stops and real-time PnL calculations.
- Built Ethereum indexing for a custodial wallet and maintained a C++ MetaTrader server plugin.

EDUCATION

Sevastopol National Technical University

Engineering Diploma in Information Systems and Technologies
