

Konstantin Fastov

Senior Backend Engineer - Blockchain Indexing & Data Pipelines

Moscow, Russia | UTC+3 | Open to remote employment and contract work

Email: kfastov@gmail.com | Telegram: [@kfastov](https://t.me/kfastov) | LinkedIn: [linkedin.com/in/kfastov](https://www.linkedin.com/in/kfastov) | GitHub: github.com/kfastov

SUMMARY

Senior backend engineer specializing in blockchain indexing and data pipelines in Go and Rust. Built token, NFT, balance, and transaction-tracing services across EVM networks and Solana, plus DEX-liquidity pricing and RPC infrastructure. Currently develops Rust market-data pipelines and a modular Solana transaction indexer.

CORE SKILLS

- **Blockchain indexing:** EVM, Solana, token and NFT indexing, transaction parsing, transaction tracing, reorg handling, SPL tokens, Geth, Erigon
- **Data pipelines:** PostgreSQL, FoundationDB, Redis, ClickHouse, RabbitMQ, append-only storage, idempotent writes, WebSocket ingestion, backfills
- **Languages and APIs:** Go, Rust, Tokio, JSON-RPC, gRPC, Protocol Buffers, GraphQL, REST, SQL
- **Operations and quality:** Linux, Kubernetes, Argo CD, deterministic testing, production debugging

EXPERIENCE

Rust Backend Engineer - Trading Systems

Confidential Crypto Trading Company | February 2025 - Present

- Designed and prototyped a modular Solana indexer with finalized-block ingestion, checkpointed cursor recovery, a per-program parser registry, append-only PostgreSQL writes, and Redis-backed transient transaction storage.
- Implemented exchange adapters for Binance USD-M, Hyperliquid, Bybit, and Lighter, and built a WebSocket market-data recorder spanning all four venues.
- Delivered 20 merged PRs to a Solana MEV/arbitrage platform across 2025 and 2026. Contributions included RPC reliability, Jupiter address lookup-table infrastructure, ClickHouse data export, and Raydium pool support.
- Currently rebuilding the arbitrage platform around a strategy-agnostic Rust core; implemented initial domain primitives, a deterministic clock and event model, and capability-based connector interfaces.

EXPERIENCE CONTINUED

Independent Open-Source Contributor

Starknet / Web3 ecosystem | part-time, paid through OnlyDust | August 2024 - January 2025

- Contributed merged upstream support for SNIP-9 Outside Execution in `starknet.js` and numeric multicall inputs in `starknet-foundry`.

Backend Developer - Go

Ankr | May 2022 - August 2024

- Worked on Ankr Advanced API, a blockchain data platform spanning 13+ EVM networks plus Solana, with contributions across indexing, gateway, and node-proxy services.
- Built and maintained token, NFT, allowance, and native-asset balance indexing; implemented adaptive NFT request batching and re-tuned Arbitrum block-fetch concurrency to address ingestion lag.
- Designed token-price pathfinding across DEX liquidity pools, with price history and route caching for assets without a direct stablecoin pair.
- Implemented internal-transaction tracing across Geth and Erigon, archive-node detection, and node-pool selection.
- Built Solana SPL-token balance and holder-count indexing plus a RabbitMQ-backed metadata-synchronization pipeline.

Backend Developer - Node.js

Alfa Algorithms | August 2021 - May 2022

- Maintained a Node.js, MySQL, and Redis trading backend and its MetaTrader 4 integration; developed Solana governance programs in Rust.

Backend Developer - Node.js

Sobix | May 2018 - August 2021

- Built a forex WebTrader backend and an Ethereum indexing module for a custodial wallet; maintained a C++ MetaTrader server plugin.

EDUCATION

Sevastopol National Technical University

Engineering Diploma in Information Systems and Technologies
