

Konstantin Fastov

Senior Backend Engineer - Blockchain Infrastructure

Moscow, Russia | UTC+3 | Open to remote employment and contract work

Email: kfastov@gmail.com | Telegram: [@kfastov](https://t.me/kfastov) | LinkedIn: [linkedin.com/in/kfastov](https://www.linkedin.com/in/kfastov) | GitHub: github.com/kfastov

SUMMARY

Senior backend engineer building blockchain infrastructure in Go and Rust. Experience spans public JSON-RPC gateways, EVM and Solana indexing, RPC reliability, transaction tracing, token data, and production trading infrastructure. Currently develops Rust systems for Solana MEV, market data, and exchange connectivity.

CORE SKILLS

- **Blockchain infrastructure:** EVM, Solana, indexing, JSON-RPC gateways, RPC clients, transaction tracing, reorg handling, token data, protocol integrations
- **Languages and APIs:** Rust, Go, Tokio, gRPC, Protocol Buffers, GraphQL, REST, WebSocket, Node.js, TypeScript, SQL
- **Data and messaging:** FoundationDB, PostgreSQL, Redis, ClickHouse, RabbitMQ, MySQL, MongoDB
- **Operations and quality:** Linux, Kubernetes, Argo CD, deterministic testing, property-based testing, production debugging

EXPERIENCE

Rust Backend Engineer - Trading Systems

Confidential Crypto Trading Company | February 2025 - Present

- Designed and prototyped a modular Solana indexer with finalized-block ingestion, checkpointed cursor recovery, a per-program parser registry, append-only PostgreSQL writes, and Redis-backed transient transaction storage.
- Delivered 20 merged PRs to a Solana MEV/arbitrage platform across 2025 and 2026. Contributions included Jito bundle tracking, Jupiter address lookup-table recovery, rate-limited and proxied RPC clients, Raydium pool support, ClickHouse data export, and graceful-shutdown improvements.
- Implemented exchange adapters for Binance USD-M, Hyperliquid, Bybit, and Lighter, and built a WebSocket market-data recorder spanning all four venues.
- Currently rebuilding the arbitrage platform around a strategy-agnostic Rust core; implemented initial domain primitives, a deterministic clock and event model, and capability-based connector interfaces.
- Used property-based and fuzz testing to exercise order-execution and reconciliation invariants, with deterministic reproductions for real production failures.

EXPERIENCE CONTINUED

Independent Open-Source Contributor

Starknet / Web3 ecosystem | part-time, paid through OnlyDust | August 2024 - January 2025

- Contributed merged upstream support for SNIP-9 Outside Execution in `starknet.js` and numeric multicall inputs in `starknet-foundry`.

Backend Developer - Go

Ankr | May 2022 - August 2024

- Worked on Ankr Advanced API, a blockchain data platform spanning 13+ EVM networks plus Solana; contributed across indexing, public APIs, RPC routing, and node-proxy services.
- Re-architected the public JSON-RPC gateway's single-chain API and routing with gRPC fan-out to indexer services; extended shared gRPC and Protocol Buffers contracts.
- Built and maintained token, NFT, allowance, and native-asset balance indexing on FoundationDB and PostgreSQL.
- Implemented internal-transaction tracing across Geth and Erigon, archive-node detection, and node-pool selection; contributed to Kubernetes deployments using Argo CD.

Backend Developer - Node.js

Alfa Algorithms | August 2021 - May 2022

- Maintained a Node.js, MySQL, and Redis trading backend and its MetaTrader 4 integration; developed Solana governance programs in Rust.

Backend Developer - Node.js

Sobix | May 2018 - August 2021

- Built a forex WebTrader backend and an Ethereum indexing module for a custodial wallet; maintained a C++ MetaTrader server plugin.

EDUCATION

Sevastopol National Technical University

Engineering Diploma in Information Systems and Technologies
