

Konstantin Fastov

Senior Backend Engineer - Exchange & DEX Integrations

Moscow, Russia | UTC+3 | Open to remote employment and contract work

Email: kfastov@gmail.com | Telegram: [@kfastov](https://t.me/kfastov) | LinkedIn: [linkedin.com/in/kfastov](https://www.linkedin.com/in/kfastov) | GitHub: github.com/kfastov

SUMMARY

Senior backend engineer specializing in exchange and DEX integrations for automated crypto trading. Built Rust connectors for centralized and on-chain perpetual venues, normalized order and account lifecycles, and hardened execution against partial fills and reconciliation drift. Earlier work spans Solana DEX infrastructure and MetaTrader-integrated forex platforms.

CORE SKILLS

- **Exchange integrations:** Binance USD-M, Hyperliquid, Bybit, Lighter, REST, WebSocket, order lifecycle, account events, funding rates, rate limits
- **DEX and Solana:** Jito, Jupiter, Raydium, transaction parsing, address lookup tables, RPC clients, SPL tokens, liquidity pools
- **Execution systems:** Rust, Tokio, order-state machines, maker-hedge execution, delta-neutral entry and exit, reconciliation, reduce-only safeguards, backtesting
- **Backend and operations:** PostgreSQL, Redis, ClickHouse, JSON-RPC, gRPC, Protocol Buffers, Linux, Kubernetes, Argo CD, production debugging

EXPERIENCE

Rust Backend Engineer - Trading Systems

Confidential Crypto Trading Company | February 2025 - Present

- Implemented exchange adapters for Binance USD-M, Hyperliquid, Bybit, and Lighter, and built a WebSocket market-data recorder spanning all four venues.
- Owned the design, implementation, and operation of a Rust funding-rate arbitrage platform with state-machine-based order execution, reconciliation safeguards, and deterministic backtesting.
- Coordinated delta-neutral entry and exit across venues; implemented reduce-only and forced-close safeguards, normalized order and account-event lifecycles, and reconciled positions after partial or failed execution.
- Delivered 20 merged PRs to a Solana MEV/arbitrage platform across 2025 and 2026. The platform covered 10+ DEX protocols; contributions included Jito bundle tracking, Jupiter address lookup-table recovery, rate-limited RPC clients, and Raydium pool support.
- Currently rebuilding the arbitrage platform around a strategy-agnostic Rust core; implemented initial domain primitives, a deterministic clock and event model, and capability-based connector interfaces.

EXPERIENCE CONTINUED

Independent Open-Source Contributor

Starknet / Web3 ecosystem | part-time, paid through OnlyDust | August 2024 - January 2025

- Contributed merged upstream support for [SNIP-9 Outside Execution](#) in `starknet.js` and numeric multicall inputs in `starknet-foundry`.

Backend Developer - Go

Ankr | May 2022 - August 2024

- Re-architected the public JSON-RPC gateway's single-chain API and routing with gRPC fan-out to indexer services; implemented Geth/Erigon transaction tracing and node selection.
- Designed token-price pathfinding across DEX liquidity pools, with price history and route caching for assets without a direct stablecoin pair.

Backend Developer - Node.js

Alfa Algorithms | August 2021 - May 2022

- Maintained a Node.js, MySQL, and Redis trading backend and its integration with a MetaTrader 4 server; developed Solana governance programs in Rust.

Backend Developer - Node.js

Sobix | May 2018 - August 2021

- Developed a forex WebTrader backend, Ethereum indexing for a custodial wallet, and trading features including trailing stops and real-time PnL calculations; maintained a C++ MetaTrader server plugin.

EDUCATION

Sevastopol National Technical University

Engineering Diploma in Information Systems and Technologies
