

Konstantin Fastov

Senior Go Backend Engineer - Web3 APIs & Blockchain Services

Moscow, Russia | UTC+3 | Open to remote employment and contract work

Email: kfastov@gmail.com | Telegram: [@kfastov](https://t.me/kfastov) | LinkedIn: [linkedin.com/in/kfastov](https://www.linkedin.com/in/kfastov) | GitHub: github.com/kfastov

SUMMARY

Senior backend engineer with eight years of experience across blockchain data and trading systems. Spent more than two years building production Go APIs, indexers, RPC routing, and token-pricing services at Ankr; now builds Rust data and trading infrastructure.

CORE SKILLS

- **Go backend:** Go, JSON-RPC, gRPC, Protocol Buffers, GraphQL, REST APIs, WebSocket, microservices, production debugging
- **Blockchain data:** EVM, Ethereum, Solana, token and NFT indexing, transaction tracing, reorg handling, liquidity-pool pricing, Geth, Erigon
- **Storage and messaging:** FoundationDB, PostgreSQL, Redis, RabbitMQ, ClickHouse, MySQL, MongoDB, SQL
- **Complementary:** Rust, Tokio, Node.js, JavaScript, TypeScript, Linux, Kubernetes, Argo CD

EXPERIENCE

Rust Backend Engineer - Trading Systems

Confidential Crypto Trading Company | February 2025 - Present

- Currently rebuilding the arbitrage platform around a strategy-agnostic Rust core; implemented initial domain primitives, a deterministic clock and event model, and capability-based connector interfaces.
- Implemented exchange adapters for Binance USD-M, Hyperliquid, Bybit, and Lighter, and built a WebSocket market-data recorder spanning all four venues.
- Designed and prototyped a modular Solana indexer with finalized-block ingestion, checkpointed cursor recovery, a per-program parser registry, append-only PostgreSQL writes, and Redis-backed transient transaction storage.
- Delivered 20 merged PRs to a Solana MEV/arbitrage platform across 2025 and 2026. Contributions included RPC reliability, Jupiter address lookup-table infrastructure, ClickHouse data export, and Raydium pool support.

EXPERIENCE CONTINUED

Independent Open-Source Contributor

Starknet / Web3 ecosystem | part-time, paid through OnlyDust | August 2024 - January 2025

- Contributed merged upstream support for SNIP-9 Outside Execution in `starknet.js` and numeric multicall inputs in `starknet-foundry`.

Backend Developer - Go

Ankr | May 2022 - August 2024

- Worked on Ankr Advanced API, a blockchain data platform spanning 13+ EVM networks plus Solana, with contributions across indexing, gateway, and node-proxy services.
- Re-architected the public JSON-RPC gateway's single-chain API and routing, adding `eth_*`-compatible endpoints with gRPC fan-out to indexer services.
- Built and maintained token, NFT, allowance, and native-asset balance indexing; implemented adaptive NFT request batching and re-tuned Arbitrum block-fetch concurrency to address ingestion lag.
- Designed token-price pathfinding across DEX liquidity pools, with price history and route caching for assets without a direct stablecoin pair.
- Implemented internal-transaction tracing across Geth and Erigon, archive-node detection, and node-pool selection; contributed to Kubernetes deployments using Argo CD.

Backend Developer - Node.js

Alfa Algorithms | August 2021 - May 2022

- Maintained a Node.js, MySQL, and Redis trading backend and its MetaTrader 4 integration; developed Solana governance programs in Rust.

Backend Developer - Node.js

Sobix | May 2018 - August 2021

- Built a forex WebTrader backend and an Ethereum indexing module for a custodial wallet; maintained a C++ MetaTrader server plugin.

EDUCATION

Sevastopol National Technical University

Engineering Diploma in Information Systems and Technologies
