

Konstantin Fastov

Senior Rust Backend Engineer - Trading Systems

Moscow, Russia | UTC+3 | Open to remote employment and contract work

Email: kfastov@gmail.com | Telegram: [@kfastov](https://t.me/kfastov) | LinkedIn: [linkedin.com/in/kfastov](https://www.linkedin.com/in/kfastov) | GitHub: github.com/kfastov

SUMMARY

Senior backend engineer with eight years of experience across trading and blockchain data systems, now focused on Rust. Built and operated automated crypto execution, exchange connectivity, market data, and deterministic backtesting systems. Earlier commercial experience includes Go blockchain APIs and indexers at Ankr and Node.js trading platforms.

CORE SKILLS

- **Rust and trading:** Rust, Tokio, order-state machines, exchange adapters, WebSocket market data, position reconciliation, backtesting, funding rates, delta-neutral execution
- **Backend and data:** PostgreSQL, Redis, ClickHouse, REST, JSON-RPC, gRPC, Protocol Buffers, GraphQL, SQL
- **Blockchain:** Solana, EVM, Jito, Jupiter address lookup tables, transaction parsing, token indexing, Starknet
- **Quality and operations:** deterministic testing, property-based testing, fuzzing, Linux, Kubernetes, Argo CD, production debugging

EXPERIENCE

Rust Backend Engineer - Trading Systems

Confidential Crypto Trading Company | February 2025 - Present

- Currently rebuilding the arbitrage platform around a strategy-agnostic Rust core; implemented initial domain primitives, a deterministic clock and event model, and capability-based connector interfaces.
- Previously owned the design, implementation, and operation of a Rust funding-rate arbitrage platform with state-machine-based order execution, reconciliation safeguards, and deterministic backtesting. It traded live on Binance USD-M and Hyperliquid from February to May 2026 across 28 perpetual symbols, including a nearly 14-day span of sustained live activity.
- Implemented exchange adapters for Binance USD-M, Hyperliquid, Bybit, and Lighter, and built a WebSocket market-data recorder spanning all four venues.
- Delivered 20 merged PRs to a Solana MEV/arbitrage platform across 2025 and 2026. Personal contributions included Jito bundle tracking, Jupiter address lookup-table recovery, rate-limited RPC clients, Raydium pool support, and improvements to bundle-profit calculation.

EXPERIENCE CONTINUED

Independent Open-Source Contributor

Starknet / Web3 ecosystem | part-time, paid through OnlyDust | August 2024 - January 2025

- Contributed merged upstream support for SNIP-9 Outside Execution in `starknet.js` and numeric multicall inputs in `starknet-foundry`.

Backend Developer - Go

Ankr | May 2022 - August 2024

- Worked on Ankr Advanced API, a blockchain data platform spanning 15+ services and 13+ EVM networks plus Solana; contributed across indexing, public APIs, RPC routing, and node-proxy services.
- Re-architected the public JSON-RPC gateway's single-chain API and routing with gRPC fan-out to indexer services; extended shared gRPC and Protocol Buffers contracts between gateway and indexer services.
- Built token-price pathfinding across DEX liquidity pools and improved production request latency through parallel price and allowance lookups; implemented Geth/Erigon transaction tracing and node selection.

Backend Developer - Node.js

Alfa Algorithms | August 2021 - May 2022

- Maintained a Node.js, MySQL, and Redis trading backend and its integration with a MetaTrader 4 server; developed Solana governance programs (smart contracts) in Rust for a validator-voting workflow.

Backend Developer - Node.js

Sobix | May 2018 - August 2021

- Developed a forex WebTrader backend, Ethereum indexing for a custodial wallet, and trading features including trailing stops and real-time PnL calculations; maintained a C++ MetaTrader server plugin.

EDUCATION

Sevastopol National Technical University

Engineering Diploma in Information Systems and Technologies
