

Konstantin Fastov

Senior Rust Engineer - Solana & MEV Infrastructure

Moscow, Russia | UTC+3 | Open to remote employment and contract work

Email: kfastov@gmail.com | Telegram: [@kfastov](https://t.me/kfastov) | LinkedIn: [linkedin.com/in/kfastov](https://www.linkedin.com/in/kfastov) | GitHub: github.com/kfastov

SUMMARY

Senior Rust backend engineer with eight years of experience across blockchain data and trading systems. Delivered features and reliability improvements for Solana MEV infrastructure spanning transaction parsing, Jupiter address lookup tables, Jito bundle tracking, and RPC reliability. Earlier experience includes Solana indexing and governance programs plus more than two years of Go blockchain infrastructure at Ankr.

CORE SKILLS

- **Solana:** Rust, Solana SDK, Jito, Jupiter address lookup tables, transaction parsing, RPC clients, Raydium, liquid-staking operational tooling, SPL tokens
- **Trading systems:** MEV, arbitrage, exchange adapters, order-state machines, WebSocket market data, reconciliation, backtesting, risk safeguards
- **Backend and data:** Tokio, Go, PostgreSQL, Redis, ClickHouse, JSON-RPC, gRPC, Protocol Buffers, RabbitMQ, SQL
- **Quality and operations:** deterministic testing, property-based testing, Linux, Kubernetes, Argo CD, production incident debugging

EXPERIENCE

Rust Backend Engineer - Trading Systems

Confidential Crypto Trading Company | February 2025 - Present

- Delivered 20 merged PRs to a Solana MEV/arbitrage platform across 2025 and 2026. The platform covered 10+ DEX protocols; personal contributions included Jito bundle tracking, Jupiter address lookup-table lifecycle and recovery, rate-limited and proxied RPC clients, Raydium pool support, and improvements to bundle-profit calculation.
- Designed and prototyped a modular Solana indexer with finalized-block streaming, checkpointed cursor recovery, a per-program parser registry, append-only PostgreSQL writes, and Redis-backed transient transaction storage.
- Maintained Solana liquid-staking operational tooling, including batched transaction submission, slot monitoring, simulation, and transaction-sequencing fixes.
- Subsequently owned a Rust funding-rate arbitrage platform. Built adapters for Binance USD-M, Hyperliquid, Bybit, and Lighter; live execution ran on Binance USD-M and Hyperliquid from February to May 2026.
- Currently rebuilding the arbitrage platform around a strategy-agnostic Rust core; implemented initial domain primitives, a deterministic clock and event model, and capability-based connector interfaces.

EXPERIENCE CONTINUED

Independent Open-Source Contributor

Starknet / Web3 ecosystem | part-time, paid through OnlyDust | August 2024 - January 2025

- Contributed merged upstream support for [SNIP-9 Outside Execution](#) in `starknet.js` and numeric multicall inputs in `starknet-foundry`.

Backend Developer - Go

Ankr | May 2022 - August 2024

- Worked on Ankr Advanced API, a blockchain data platform spanning 13+ EVM networks and Solana; built Solana SPL-token balance and holder-count indexing plus a RabbitMQ-backed metadata-synchronization pipeline, alongside EVM token and NFT services.
- Designed token-price paths through up to three hops across DEX liquidity pools and contributed to the JSON-RPC gateway, gRPC contracts, transaction tracing, and production deployments.

Backend Developer - Node.js

Alfa Algorithms | August 2021 - May 2022

- Developed Solana governance programs (smart contracts) in Rust for a validator-voting workflow; maintained a Node.js trading backend and its MetaTrader 4 integration.

Backend Developer - Node.js

Sobix | May 2018 - August 2021

- Built Ethereum indexing for a custodial wallet and developed a forex WebTrader backend; maintained a C++ MetaTrader server plugin.

EDUCATION

Sevastopol National Technical University

Engineering Diploma in Information Systems and Technologies
